### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 26 and 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Curtiss (4287795) in view of McCann (6216565).

Curtiss discloses all of the claimed subject matter except for the torque transmitting element passing through at least one of the rotatable elements and providing a retaining element engageable with the torque transmitting element to secure the interlocked tool housings together. Note that Curtiss discloses a torque transmitting element (32) extending into at least one of the rotatable elements and a retaining element (56L and 56R) to secure the interlocked tool housings together.

McCann discloses a torque transmitting element (50) passing through at least one of the elements and providing a retaining element (54) engageable with the torque transmitting element (50) to secure the interlocked tool elements together. It would have been obvious to one having ordinary skill in the art to form the torque transmitting element of Curtiss such that it passes through at least one of the rotatable elements and to form the retaining element of Curtiss as engageable with the torque transmitting element to secure the interlocked tool elements together as taught by McCann.
